Same model/budget; per-cell maxima across historical runs and generation recipes, for inspection; no single joint run or paired accuracy claim.
— Missing or protocol unresolved. * VizWiz validation, EADP released evaluator. † Historical protocol caveat.
Recipes vary by cell; see changes.csv for sources/SHA/recipes/caveats. NeXT budgets are nominal.
SQA: shipped CQM-A, 2017 image questions. POPE: mean F1 (2910 / 3000 / 3000).
LLaVA MME: perception; Qwen MME: perception + cognition. Reported rows are paper references.
For Qwen, dagger also includes Native DeepStack + 3D mRoPE: historical execution differs from official legacy. The row contains per-cell maxima; Avg10 averages these maxima, not one joint run.
Avg10 = (8 percentage columns + OCRBench/10 + MME/20)/10; derived from selected cells.
Qwen legacy generation-bank provenance caveats remain; see JSON and changes.csv.
